WORK EXPERIENCE

Clearbrook, Chicago, IL

IT System Administrator, 02/2018 till date

- Provide System Administration support for Unix systems including server and workstation upgrades, backup and disaster recovery.
- Develop and implement Active Directory security solutions, ensuring access is appropriate for files, servers, systems, and applications.
- Implement enterprise best-practice IT Operations process, procedures, and technology

Ideasoft Technologies, Lagos, NG

Junior Web Developer 08/2014 –12/2016

- Build client websites with WordPress.
- Designed and implemented new features and functional WordPress plugin using HTML, CSS, PHP and JavaScript.
- Worked with QA Department on a customized testing plan.
- Monitor uptime, hosting, and databases to ensure site is performing at maximum capacity.
- Coordinated resources with varied programming expertise to create a holistic solution to system update and service interruption issues.
- Evaluates and recommends new software, hardware, and services to enhance functionality and reduce user problems.

Federal polytechnic Ilaro, Ogun, NG

IT System Administrator / Assistant Lecturer (Introduction to Web Development 101), 11/2013 – 11/2014

- Assisted in lecture and practical instructions delivery on HTML, HTML5 and CSS.
- Addressed a wide array of technical issues with Microsoft Office Suite 365, Windows operating systems, and other proprietary software and databases.
- Provided quick and effective day-to-day support to college students and professors, addressing issues related to desktop/application performance, connectivity (both wired and wireless), configuration, and general how-to questions.

PROJECTS

- **Moviedb Project :** The idea of Moviedb app, is to create a platform where users can check recent movies or shows and also, see what is trending with regards to movies or shows. Users can see details about each movie/show and also search for their movie of choice. New features will be added such as movie thrillers and movie suggestions based on what movie you are checking its details. This project is built purely with React JS, using Redux as the state management.
- **DevFConnect :** Currently working on DevFConnect, which is a social media application, where developers can create an account, and connect with other developers. The idea of this app is to provide a platform where developers can make friends with other developers. This is a MERN STACK application. Authentication built with jwt token and passport.js
